

DOCMO

Document Management System

DOCMO

Docmo is a system used to track, manage and store documents. Most are capable of keeping a record of the various versions created and modified by different users. It provides some of the most basic functionality to content management, imposing controls and management capabilities onto otherwise “dumb” documents. Docmo makes it so that when you have documents and need to use them, you are able to do so.

FEATURES

-  Dynamic default values for metadata.
-  Filesystem integration
-  User defined document unique identifier and checksum algorithms.
-  Local file or server side file uploads.
-  Batch upload many documents with the same meta-data.
-  Previews for a great deal of image formats, including PDF.
-  Full text searching.
-  Configurable document grouping.
-  Permissions and roles support.

Multi page document support.

Distributed OCR processing.

Duplicated document search.

Plugable storage backends (File based and GridFS included)

Color coded tagging.

What Can DOCMO Do?

Upload your documents, attach any sort of data you want to each document, organize them by hand or tell Docmo how you want them categorized and it will do it for you for, search your document repository by any string of text.
